
1 RUN THE MODEL
by GGM
GGM solving...
a full run: about 24 min
on the analysts' own machine; only the results leave it
results
2 DEVIATION REPORT
by code
Country A
Country B
Country C
Country D
Country E
Country F
too low
tolerance
too high
deviations
3 DIAGNOSE
by the agent
A produces too little. Possible causes:
its cost is too high
its capacity is too low
market power (the analyst's call)
Proposal: lower A's cost one step, because the gap is large.
a change
4 CHECK, APPLY, LOG
by code
allowed range
applied
rejected
Calibration log
run 6 B's cost raised
run 7 C's cost lowered
run 8 A's cost lowered
next run
follows the log
THE ANALYST
corrects a diagnosis
picks between equal fits
keeps market power
accepts the fit
becomes a lesson
WHAT THE AGENT READS
lessons
heuristics
and the deviation report and the log
