

The Strait of Hormuz stays closed

What happens to the world gas market over one year?

STRAIT CLOSED

Analyst | Scenario agent | Data agent | Calibration agent | Results agent | Code and GGM

1 QUESTION

The closure is in the news. The analysts wait about a month to see whether it lasts, then decide to start.

2 SCENARIO

storyline

one year; open or closed; Russian supply also cut

Proposes: about 90 nodes instead of 136, no seasons or storage; blocks every LNG route from inside the Gulf with very large distances; asks about Gulf market power and pipeline expansion.

edits + reasons

approved: create the variants

the variants differ only in the general workbook

3 DATA

Rebuilds the general workbook: maps sources to the new nodes; drafts one year of projections; proposes an elasticity class for each node.

aggregates capacities; recomputes distances

Gulf price: official domestic

reply: that price is subsidised

revised value + proposed lesson

The lesson is approved, then applied to the other countries with subsidised prices.

4 CALIBRATION

on the baseline, strait open

proposed change

deviation report

repeat

corrects one diagnosis

accepts the fit

5 RUNS AND RESULTS

code runs every variant with the same calibration

results

Drafts: where the missing LNG is replaced and which importers lose most; flags odd patterns.

explanations, with their tables

The analysts decide what the results show and write the findings.
