Step 1
Set up the scenario
Step 2–3
Get and prepare data
Step 4
Calibrate
Step 5
Run the model
Step 6
Read the results
an implausible result can send the work back to the storyline
Analyst
states the question and storyline; approves edits
decides nodes, projections and elasticities
follows the log; accepts the fit
nothing to decide
interprets and writes the findings
Agents
finds the rows the storyline touches; proposes edits
reads reports, maps sources, drafts projections
diagnoses deviations; proposes a change
at most explains a failed run
drafts explanations; flags odd patterns
Code
applies edits; shows the difference
downloads, converts, aggregates, checks
deviation report; bounds; log
runs the scenario matrix; records inputs
compares the scenarios
GGM
loads data; warns on capacity
baseline run
solves each variant
